- Food dish
- Perches
- Toys

Please Call With any Questions or Concerns

Animal Ark has multiple exotic focused Veterinarians on staff including the Owner of the practice, Dr. Spindel.

Please call to schedule an appointment with one of our wonderful Veterinarians today!

1. Cage: despite their small size these birds need ample space to climb, fly, eat, drink and play.
2. Water dish: fresh water is always needed and many birds like to bathe in the water too, so offering a big dish for both can be helpful.
3. Food dish: a good dish for their pelleted diet is important for their health.
4. Bottom substrate: a nice corn cob bedding works well to collect droppings.
5. Perches: Several perches or different thicknesses, textures and at different heights is important for their health and entertainment.
6. Toys: Birds are very active creatures and love toys to keep they entertained. There are a variety of toys out there, some like mirrors and some don't. Try to rotate toys out to keep them fun and exciting.

Diet:

We recommend Harrison's bird food for all our birds! Seeded diets can lead to many health and behavioral issues. Scan the QR code to read more about how to transition your bird over to Harrison's Bird Food.

Good to Know:

While most of these smaller birds aren't as handleable, they do appreciate interaction and whistling.

Rearranging their cage can offer a fun enrichment to them.

These birds, like many, do better with more darkness at night. Covering their cage in a light blanket may help them with stress and to sleep better.

Enrichment is extremely important for bird health. Be sure to add new elements, toys they can destroy and food/treats they have to work for to eat. Mental stimulation exhausts the body as well and is great to prevent behavioral issues.
